## **DETAILED ACTION**

### ***Respond to Preliminary Amendment***

1. This office action is in response to the preliminary amendment file on 3/19/04.
  - Claims 2-5 are newly added.
  - Claims 1-5 are pending in the application.

### ***Claim Objections***

2. Applicant is advised that should claim 2 be found allowable, claim 3 will be objected to under 37 CFR 1.75 as being a substantial duplicate thereof. When two claims in an application are duplicates or else are so close in content that they both cover the same thing, despite a slight difference in wording, it is proper after allowing one claim to object to the other as being a substantial duplicate of the allowed claim. See MPEP § 706.03(k).

### ***Double Patenting***

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Art Unit: 2818

3. Claims 1-5 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 22-33 of U.S. Patent No. 6,611,425. Although the conflicting claims are not identical, they are not patentably distinct from each other because the elements recited in claims 1-5 of the present application are art recognized equivalent with claims 10-33 of U.S. Patent No. 6,611,425.

With regard to claims 1-5, the present application recited a semiconductor memory device comprising memory cells, reference cells, first, second, third resistances, which is a mere similar version of the semiconductor memory device disclose in claims 10-33 of U.S. Patent No. 6,611,425. The purpose of the device is to provide fast and reliable sensing within the semiconductor memory device.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Tang et al. (5,966,330).

Regarding to claims 1-3, Tang et al. disclose a semiconductor device comprising: at least one memory cell configured to generate a first voltage on a first bit line (BL) and including a switching device (Qp) having first resistance; at least one reference cell configured to generate a second voltage on a second bit line (REF) and including a first resistive element (422) coupled

Art Unit: 2818

between a voltage source (VCC) and the second bit line and having a second resistance (R2); and a second resistive (QR) couple between a sink and the second bit line and having a third resistance; a sense amplifiers (420) for generating an output in response to the first and second voltages; wherein at least one of the first and the second resistive elements comprises a transistor. *See. Figs. 3-6; Cols. 2-7.*
